

Q U E S T A

● Data centers
1dot = 50 data centers

----- Data cables

Select a video on YouTube

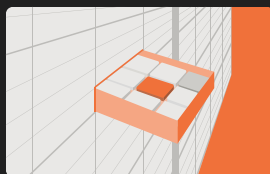

Your request goes through the optical fiber cables which lie in the sea (and survived the sharks)

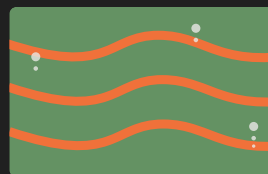

*Actually human activity cause the majority of the faults.

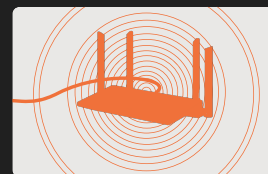

Your request reaches the data center in the USA and video is found! It's stored in a solid-state device within a data center.

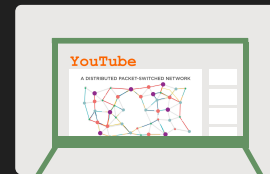

Your request reaches the data center in the USA and video is found!

Each packet splits up to a different way which is the quickest at that moment.

The video goes in your router.

The video starts to play.
